

Initial Assessment Report

Consultation Completed: 7th October 2019

Mr Slater is a 46 year old man and has been taking treatment equivalent to **Step 4** of the BTS / SIGN Asthma Guidelines. This is his **1st** entry to the Lung Health software.

Diagnosis

Main pointers to an asthma diagnosis include:

- Reports symptomatic benefit from inhaled therapy

Other Supporting Information:

- When this patient gets a cold, it always goes to his / her chest
- After exertion, this patient experiences worsening chest symptoms (and it responds to inhalers)
- Triggers:
 - Passive Smoking
- Patient has previously scored 2 or 3 on Royal College of Physicians (RCP) 3 Questions, indicating poor asthma control
- Patient has concomitant eczema or hay fever

Other Supportive Test Results:

- Bronchodilator Reversibility (> 12% and 200 ml change in FEV1 or FVC)

Today's Spirometry

Today's FEV1 was recorded as **3.4** litres which is **87%** of the patient's predicted value of **3.9** litres

Personal Features

He is a non-smoker.

Control

Overall control has been assessed as **poor**. Their control is based on the following:

- The Royal College of Physicians Three Questions - 3/3 (high is poor)
- Score of 13/25 (high is good) on the Asthma Control Test
-
