

Exacerbation Report

Consultation Completed: 13th July 2017

Mr Stark is a 64 year old man and has been on no asthma treatment. This is his 45th entry to the Lung Health software.

Exacerbation Review

The patient presented to the Lung Health Asthma software today with a possible exacerbation. An exacerbation review was undertaken. However, there was no significant increase in asthma symptoms and that makes it unlikely they had an asthma exacerbation. It was decided instead to manage other factors and leave asthma control unaltered. A summary of what was chosen for this patient is presented below:

test

Symptom Severity

- The patient recorded a PEF of , which is 0% of .
- The patient was not able to speak in complete sentences, which is **abnormal**.
- The patient's respiratory rate was breaths per minute, which is **normal**.
- The patient's heart rate was beats per minute, which is **normal**.
- The patient's Arterial Oxygen Saturation was %, which is **abnormal**.
