

Initial Assessment Report

Consultation Completed: 17th August 2019

Mr singh is a 35 year old man and has been taking treatment equivalent to **Step 3** of the BTS / SIGN Asthma Guidelines. This is his **1**st entry to the Lung Health software.

Diagnosis

Main pointers to an asthma diagnosis include:

Patient has been on inhalers since childhood or for more than ten years

Other Supporting Information:

Patient has previously scored 2 or 3 on Royal College of Physicians (RCP) 3
Questions, indicating poor asthma control

Other Supporting Information:

A hospital OPD assessment for asthma

Other Supportive Test Results:

PEF Chart Variability

Personal Features

He is a non-smoker.

Control

Overall control has been assessed as **poor**. Their control is based on the following:

- The Royal College of Physicians Three Questions 3/3 (high is poor)
- The patient has had no exacerbations in the last 12 months
- The patient used their reliever inhaler 3-4 times last week
- The patient's PEF is 72.90% of expected

Clinical Examination

The patient underwent a clinical examination today and the following abnormal findings were noted:

BMI of 30.47 indicates the patient is obese

Drug Therapy

The therapy recommendation from this consultation is:

This patient is poorly controlled on Step 3 therapy. Both inhaler technique and adherence to medicines are reported to be good and there is no acute reason so consider stepping up therapy to regain control. You have chosen to step up to Step 4 therapy.

You have chosen to refer for specialist advice to referral to Dr Angus at Aintree.

Plan to review in 3 – 6 months to check that control is re-established.

Salbutamol 100mcg inhaler CFC free 2 doses, as required daily remains unchanged.

Formoterol Easyhaler 12mcg dry powder inhaler 2 puffs, twice daily has been started.

Beclometasone 250mcg inhaler 1 dose, twice daily remains unchanged.

Montelukast 10mg Tablets 1 tablet, once daily has been started.

Patient is currently taking no non-respiratory medication

Other Checks and Advice

Inhaler technique with current medication has been checked and was found to be adequate for current devices

Checks on prescription collection suggest good concordance with therapy.

Aggravating Factors

Employment

No work related factors have been found.

Triggers

No triggers have been identified.

Vaccination Status

- The patient's flu vaccincation is not up to date but the vaccine is not currently available.
- The patient's pneumococcal vaccincation is not up to date but the vaccine is not currently available.

Education Materials and Management Plan

A written management plan has been supplied and it has been confirmed that the patient understands it.

Information about the Asthma UK online advice website has **not** yet been given to the patient.

Asthma UK online resouces have **not** yet been given to the patient, and the patient has not been made aware of them.

A Peak Flow meter has been issued to the patient with the details: peak flow meter given

Referrals, Tests and Labs
